

Silvia Ceñal / Forêt table

Les Landes (France) forests are mainly compound of pines. When these trees are still small, their lowest branches are cut, so that when they grow and become adults they become great high pines with the top full of branches. These strong and firm branches grown perpendicularly to the tree's log. And this is the concept on which is inspired the Forêt table. The detail which makes the difference in this piece is the joint between rounded strips and table's leg. Creating an original and unique joining point. Material: Oak wood Dimensions: 132x80x75cm
